

K-POP Fandom Project LeisureMeta

LM WHITE PAPER

SEPTEMBER 2025

INDEX

1. LeisureMeta Project

- 1-1 Introduction to the LeisureMeta Project
- 1-2 A New Form of Employment: Web 3.0 Creator
- 1-3 A New Form of Space: LM Oil Tank Culture Park

02. LeisureMeta Ecosystem

- 2-1 Overview of the LeisureMeta Ecosystem
- 2-2 Governance Structure of the LeisureMeta DAO
- 2-3 LeisureMeta Token Economy
- 2-4 LeisureMeta DApp and Services

03. Business Objectives

- 3-1 The K-POP Fandom Market
- 3-2 LeisureMeta Business Objectives
- 3-3 Business Model and Revenue Structure
- 3-4 Roadmap

04. Technical Details

- 4-1 Technological Background
- 4-2 Development and Core Technologies of the LeisureMeta Chain
- 4-3 Performance and Operational Achievements
- 4-4 Strategic Transition: Integration into the EVM Ecosystem

05. Token Issuance and Distribution

- 5-1 Token Issuance Information
- 5-2 Token Distribution Structure and Circulation Plan

06. Team and Advisors

- 6-1 Core Team Members
- 6-2 Advisors
- 6-3 Technical Advisors
- 6-4 Creative Advisors
- 6-5 Legal Advisors

07. Partners

- 7-1 Strategic Partnerships

Legal and Risk Factors

This document has been prepared to provide information, including the LM Token ecosystem and its technical details, to unspecified individuals who are interested in the LeisureMeta (LM) Token Project.

The LM Team has carefully reviewed the relevant matters and provided detailed technical descriptions to prepare the information contained herein, and uses reasonable efforts, including updates, to deliver the most current information. However, this does not mean that the LM Team guarantees or represents that any part of this document is accurate or complete. The contents of this document were prepared as of the date of drafting, and none of the contents, in whole or in part, constitutes any binding commitment or obligation. Accordingly, the LM Team assumes no legal responsibility for any damages arising from the use or non-use of the information set forth herein, or from any inaccuracies or incompleteness in the content.

Furthermore, the LM Team bears no responsibility for any acts in which this document is used for purposes other than providing information, which is its sole intended purpose. In the event of any discrepancies in interpretation between this document written in Korean and versions translated into other languages, the most recent Korean version shall take precedence. However, this shall not be construed as a guarantee of responsibility for the contents of the Korean version. No part of this document may be copied, modified, distributed, or provided to any third party without the prior consent of the LM Team.

The “forward-looking information” contained in this document refers to information that has not been subject to independent verification. Such information relates to future events rather than past ones, and refers to anticipated future performance. Expressions of forward-looking information may include words such as “expect,” “forecast,” “plan,” “anticipate,” and similar terms. These forward-looking statements are subject to changes in future circumstances and are inherently uncertain. As a result of such uncertainties, actual future performance may differ materially from the content expressed or implied in the forward-looking information.

In addition, the forward-looking statements are based on conditions as of the date of this document and reflect current market circumstances and development environments. They are subject to change due to future environmental shifts or strategic adjustments, and such changes may occur without prior notice. The LM Team assumes no legal or moral responsibility for any losses arising from the use of this document.

If any terms or expressions of this disclaimer regarding the exclusion of legal liability under this document are found to be inconsistent with applicable laws, such terms or expressions shall become invalid until they are amended. However, the remainder of the disclaimer shall continue to remain in full force and effect.

Leisure + Meta = LEISURE META

LeisureMeta is a New Normal community project that seeks to establish a socio-cultural and economic ecosystem where Web 3.0 creators and fans come together. The term “Leisure” originates from the Latin word *Licere*, meaning “to set people free,” which refers to freedom from work and obligations. LeisureMeta expands upon this concept by redefining all creative activities, whether online or offline and beyond the boundaries of conventional work and duties, as a new form of labor.

Meta signifies not a mere extension but a leap to a higher dimension. The Metaverse is a space that transcends the extension of the physical world and opens a new horizon for the digital economy. In the era of the digital economy expanded by the Fourth Industrial Revolution and technological innovation, LeisureMeta introduces the concept of the Web 3.0 Creator as a new form of employment and source of income to set people free in the truest sense.

A Web 3.0 Creator is a new form of profession in which anyone can become a creator, build a fandom, and enjoy both economic freedom and creative autonomy. Through a blockchain-based token economy, LeisureMeta guarantees creators the rights to the ownership and added value of the content and data they produce, while also supporting the formation of autonomous communities built on DAO governance.

In the LeisureMeta ecosystem, ordinary users can follow creators to become fans and, by going beyond simple support, grow together as members of a socio-cultural and economic community. To realize this vision, LeisureMeta is building the virtual space of Metaverse City and the LM Oil Tank Culture Park, a hub where the physical and digital worlds converge, thereby presenting a new urban culture that bridges the virtual and the real.

As a Web 3.0 Enabler, LeisureMeta provides the core infrastructure for a digital economy where rights are guaranteed, aiming to realize a New Normal socio-cultural and economic community founded on respect for humanity and freedom of will.

1-2 A New Form of Employment: Web 3.0 Creator

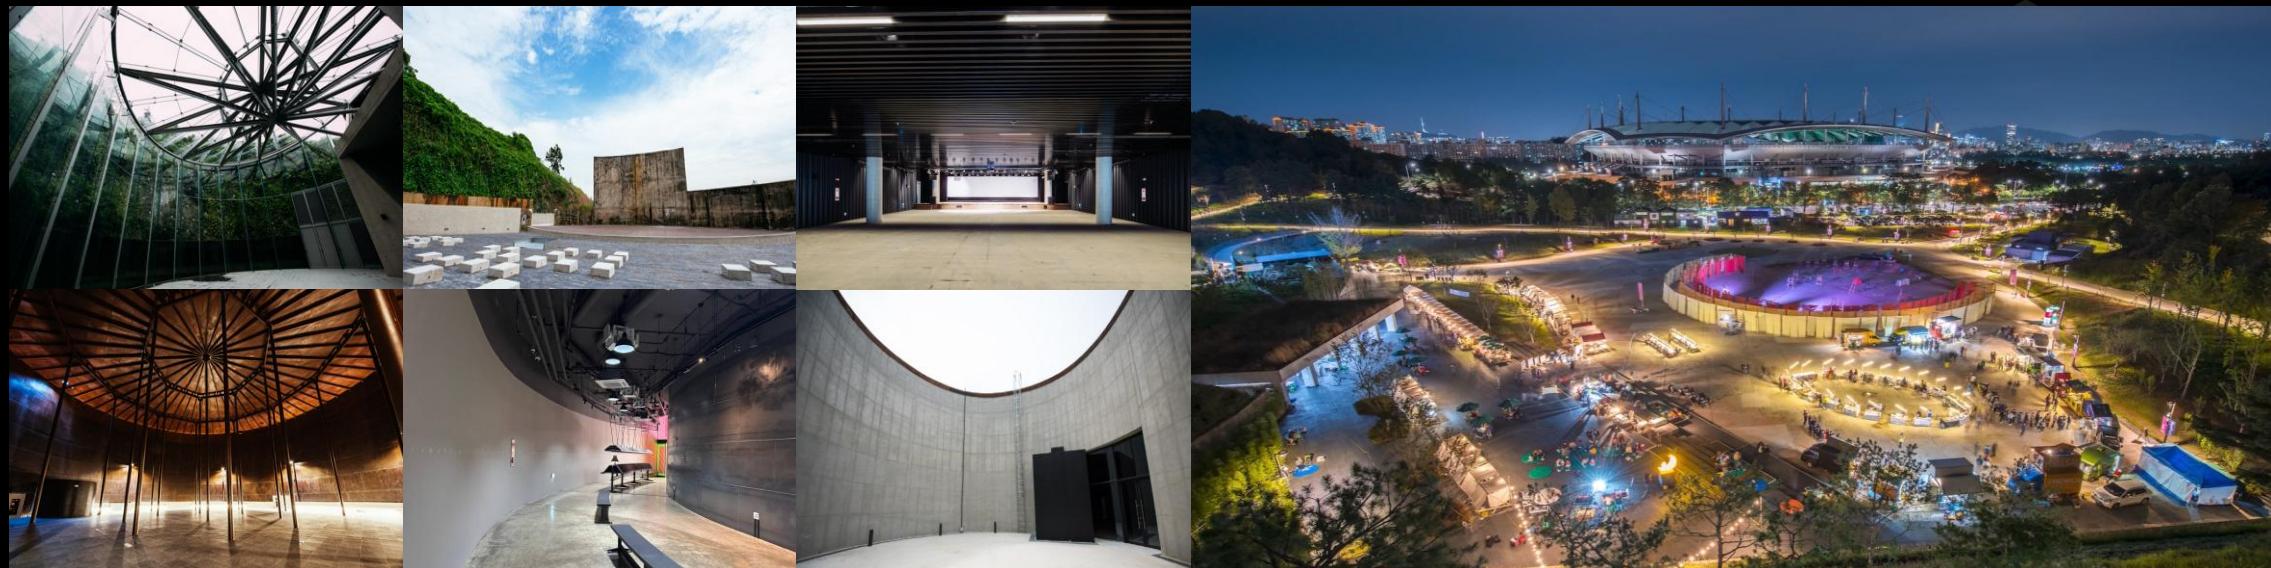

As the Fourth Industrial Revolution accelerates the replacement of traditional jobs by automation and machines, humanity requires new forms of employment and sources of income to achieve true freedom from work and obligations. In response to these changes, LeisureMeta leverages blockchain and Web 3.0 technologies to redefine creative activity as labor, enabling creators to preserve the full value of their data and digital content while enjoying fair rights. Through this framework, LeisureMeta introduces the Web 3.0 Creator as a new profession where anyone can become a creator, build a fandom, and be assured of both economic freedom and creative autonomy. The LeisureMeta ecosystem serves as the foundation for these activities.

1-3 A New Form of Space: LM Oil Tank Culture Park

LeisureMeta presents a new form of space where Web 3.0 creators and fans go beyond mere online communication to experience the connection between the physical and digital worlds. A representative hub of this vision is the LM Oil Tank Culture Park. The LM Oil Tank Culture Park is not simply an offline venue but functions as a hybrid hub where the metaverse and the real world intersect. It is both a physical community where creators and fans can meet and interact directly, and a space interconnected with Metaverse City that provides an experience breaking down the boundaries between online and offline. In other words, fandoms and creative activities formed in the digital world extend into a real-world space, while real-world activities are reflected back into the digital ecosystem, creating a bidirectional center of exchange. The LM Oil Tank Culture Park is designed not merely as a cultural venue but as a hub where diverse activities such as creation, exhibition, performance, education, and business networking can take place. Through this, Web 3.0 creators can share and monetize the digital content they produce in offline settings, while fans can directly engage with creators and participate as members of the community. Ultimately, the LM Oil Tank Culture Park will serve as the experiential core of the LeisureMeta ecosystem and establish itself as a landmark of the Web 3.0 creator economy that bridges the virtual and the real.

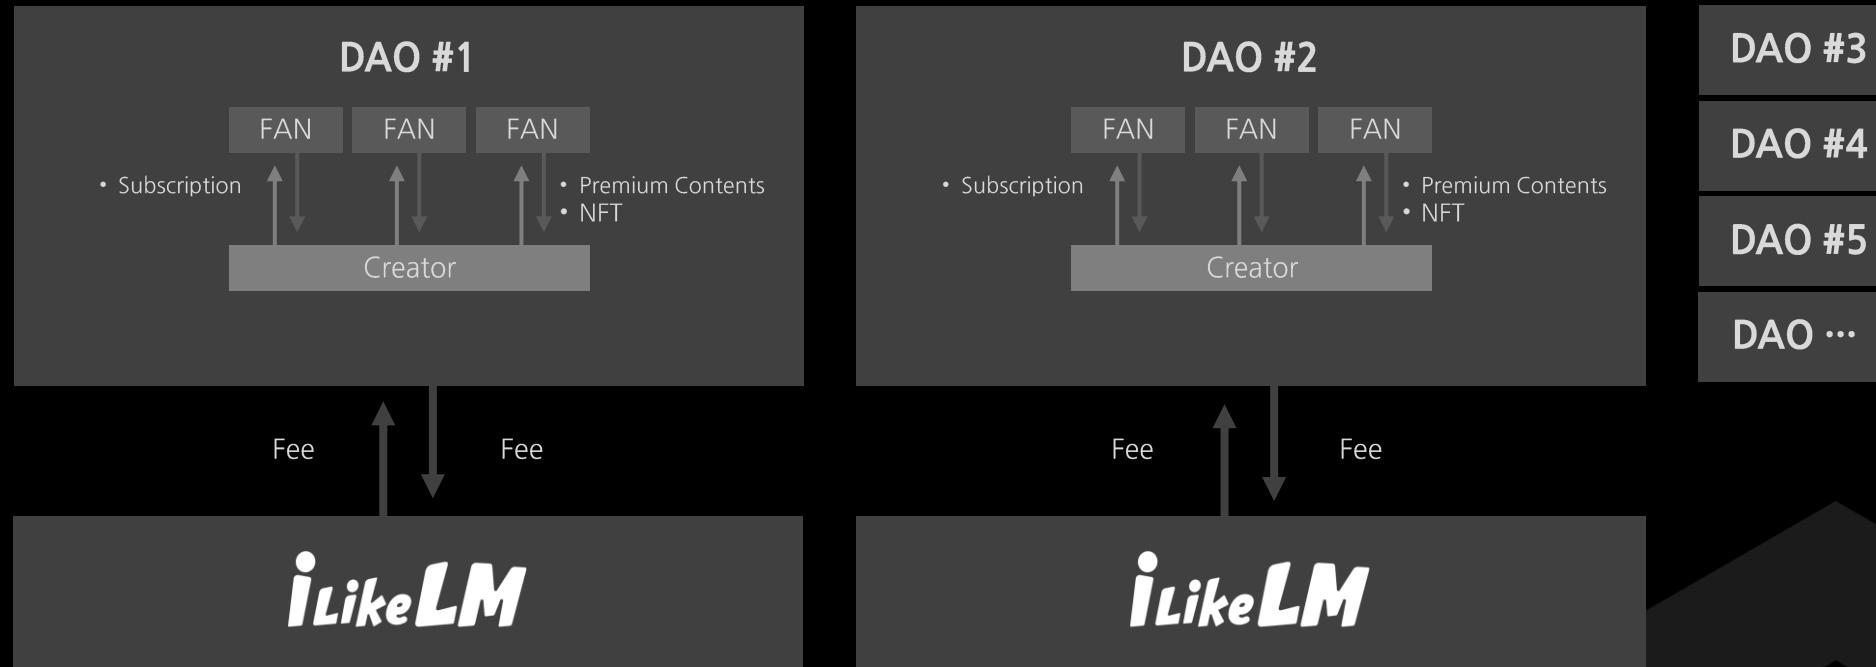

2-1 Overview of the LeisureMeta Ecosystem

The LeisureMeta ecosystem is an autonomous community in which blockchain, DApps, DAO, LM Tokens, commerce (MD), and the LM Oil Tank Culture Park are organically interconnected. Members secure trust and transparency through blockchain, while carrying out autonomous decision-making and collaboration through DApp and DAO governance.

The LM Token hub, provides a space where creators and fans can meet, interact, and continue creative activities such as exhibitions, performances, and workshops. Through commerce (MD) serves as a medium that connects the online and offline worlds as well as the metaverse and the real economy, enabling both transactions and sponsorships. The LM Oil Tank Culture Park, as an offline , it transforms fandom participation into tangible economic activities. In this way, LeisureMeta establishes a circular ecosystem where Web 3.0 creators and fans grow together.

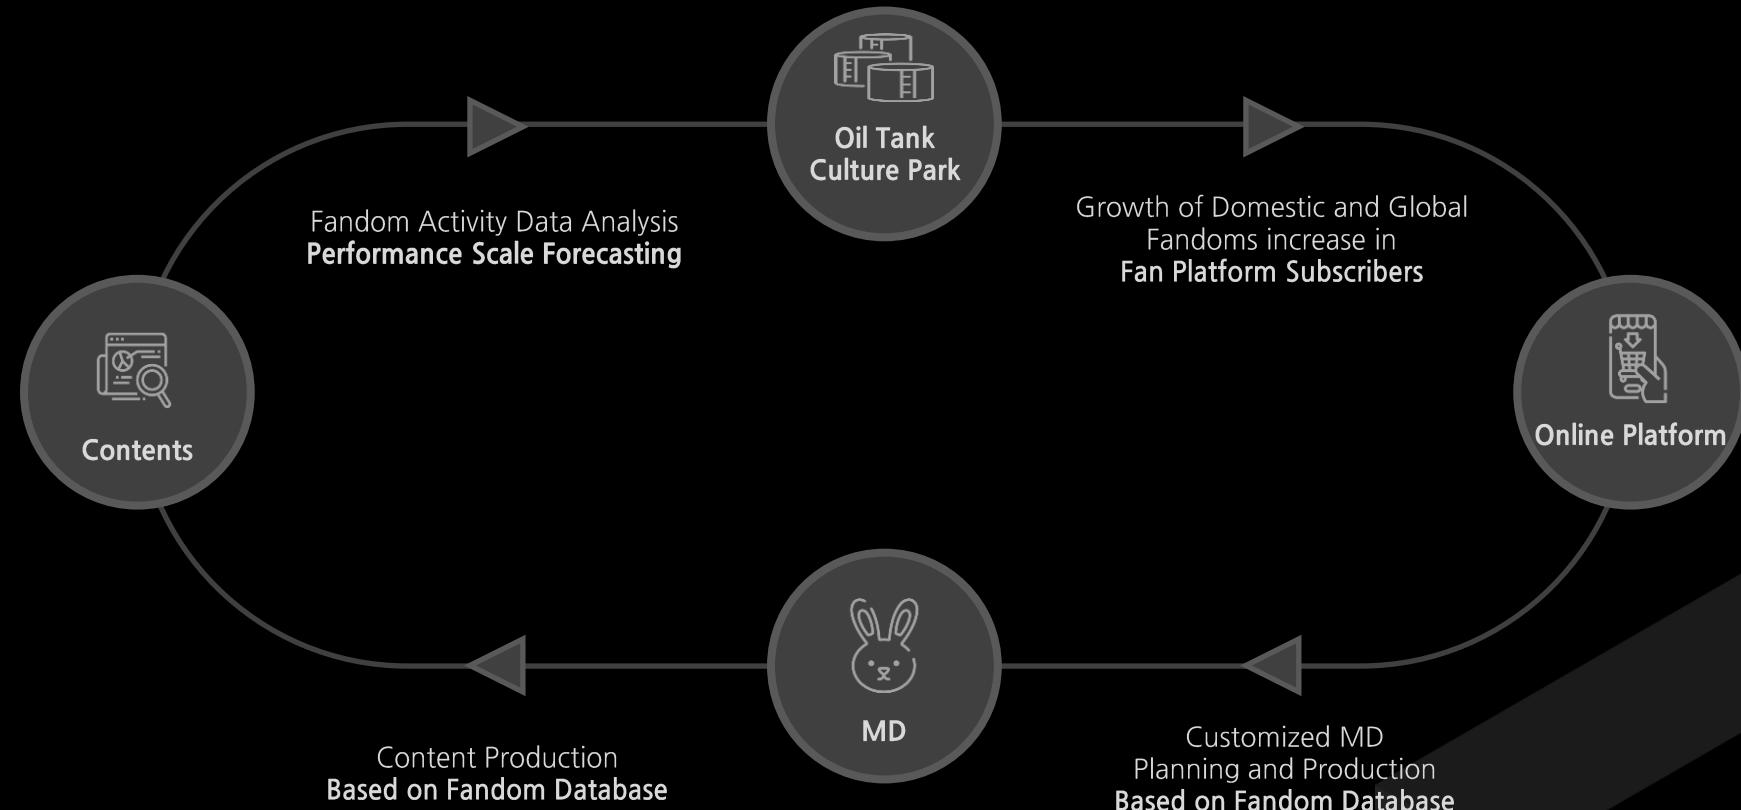

2-2 Governance Structure of the LeisureMeta DAO

The LeisureMeta DAO governance is designed as a transparent and decentralized system in which all members can participate in decision-making and execution. Governance voting rights are granted to members based on their LM Token holdings and level of participation in activities. Web 3.0 creators and fandoms can propose a wide range of agendas, including ecosystem expansion, DApp operations, and community rules. Decisions are processed through blockchain-based voting and executed automatically via smart contracts, ensuring that every step of the process is transparently recorded.

Validators are participants in the blockchain network who verify transactions and generate blocks. While they are initially appointed by the development team, once the DAO is launched, they are elected through community voting. Although the project is operated by the development team in its early stages, governance is gradually transferred to the DAO, evolving into a voluntary and decentralized community. Through this process, the LeisureMeta DAO provides an environment where all members can pursue common goals and create social, cultural, and economic value together.

2-3 LeisureMeta Token Economy

The LM Token plays a central role in the LeisureMeta ecosystem, which integrates the online and offline domains. The platform evaluates the activities of creators based on data from content views and purchases, enabling predictions about the scale and potential success of offline cultural events such as performances, exhibitions, and festivals. As participation in these events increases, the understanding and engagement of fandoms grow, leading to an expansion of both domestic and global fans as well as platform subscribers.

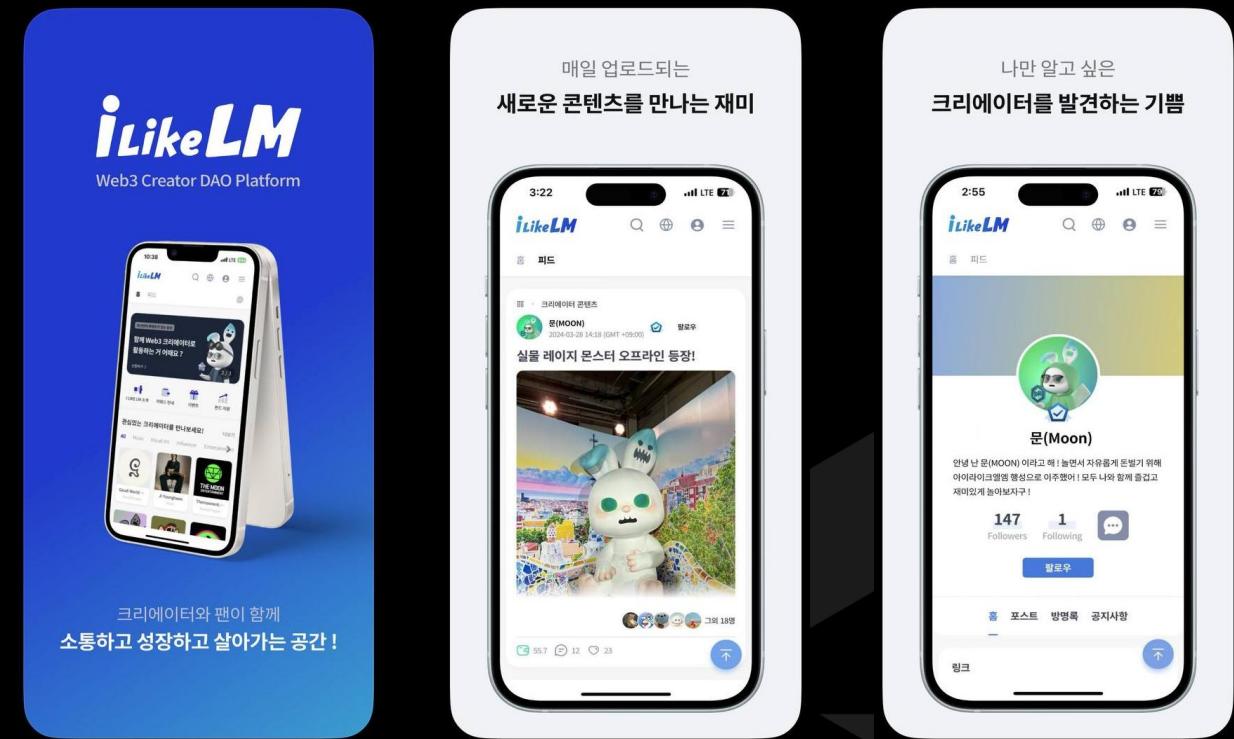

In addition, fandom data enables the planning and production of customized MD products, and the expansion of MD offerings leads to the accumulation of additional fandom data, creating a virtuous cycle. The data collected is further linked to content creation and purchasing activities, thereby promoting ecosystem participation and economic activity. Through this process, the digital and real economies are organically connected, and a sustainable ecosystem is established where creators and fandoms grow together. The LM Token serves as the central medium that connects participation, activity, and data-driven decision-making within the ecosystem, strengthening LeisureMeta's economic structure and facilitating interaction among participants.

2-4 LeisureMeta DApp and Services

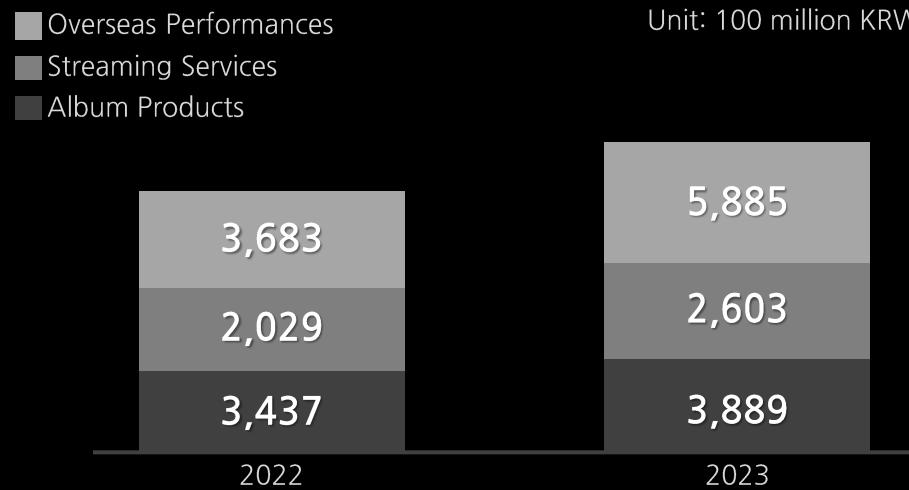

I LIKE LM is a community platform that connects Web 3.0 creators with their fandoms. Users can freely create and share digital content of their choice, forming the foundation for interaction between fans and creators. As fans enjoy and follow the digital content produced by Web 3.0 creators, fandoms naturally emerge. Based on shared values and goals, fandoms and creators can establish their own DAOs or participate in existing ones.

I LIKE LM users are not merely consumers of content but participate as prosumers who directly produce and consume goods and merchandise of their choice, thereby contributing to the formation and operation of the community. As DAO members, users take part directly in governance, establish rules, and propose the creation of diverse services such as digital art, videos, IP, memberships, music, event tickets, and product vouchers. Through these activities, I LIKE LM supports a community ecosystem where creators and fandoms grow together, fostering a sustainable structure of collaboration.

3-2 LeisureMeta Business Objectives

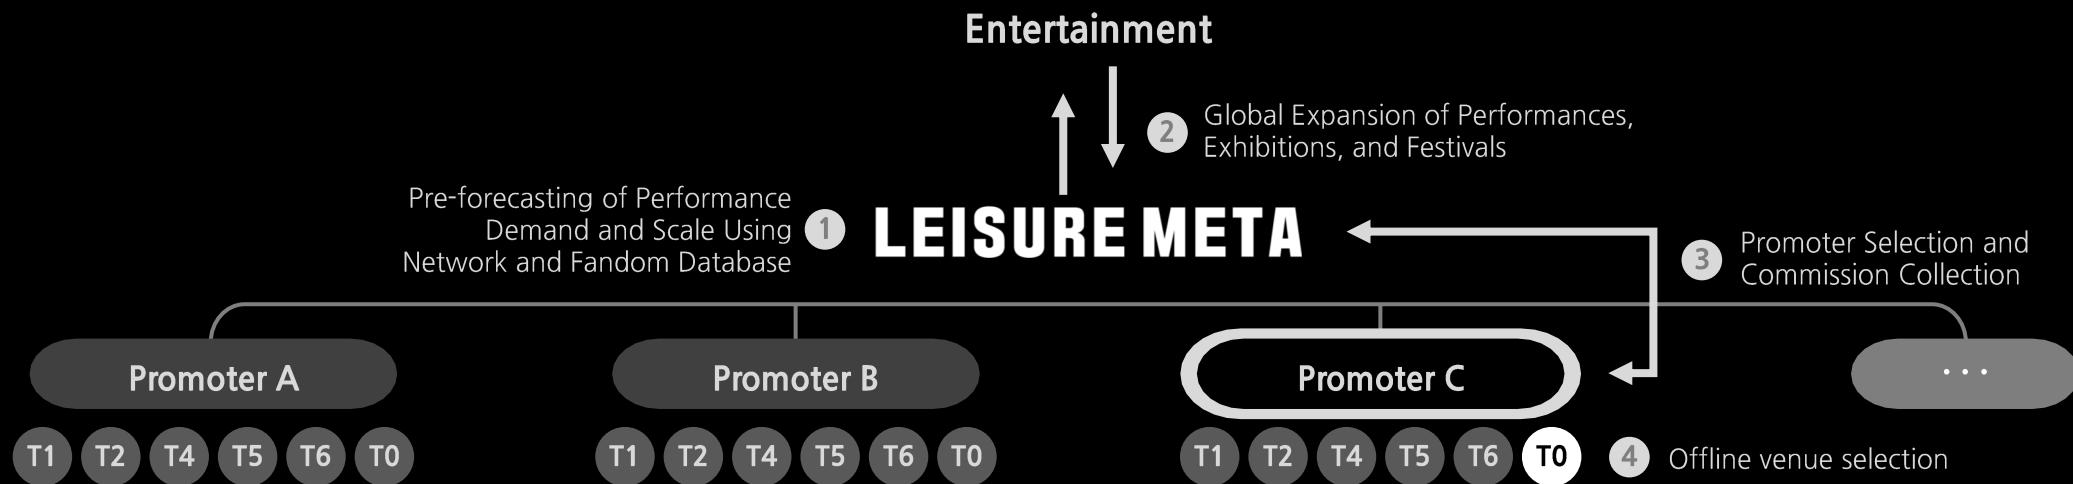

The business objective of LeisureMeta is to establish the LM Oil Tank Culture Park as an offline hub that brings together diverse cultural content such as performances, exhibitions, and festivals, while enabling creators and fandoms to interact directly in real life. At the same time, through its fan platform, LeisureMeta builds a Web 3.0-based community that supports demand forecasting and content production driven by fandom data, and realizes fandom-led governance to expand the ecosystem from simple consumption to active participation and creation. In addition, through commerce (MD) content, LeisureMeta promotes customized product planning based on fandom data, the sale of limited-edition merchandise, and digital IP, which are then reinvested into content creation and consumption to complete a virtuous cycle. With these strategies, LeisureMeta aims to organically connect online and offline domains as well as the digital and real economies, ultimately evolving into a sustainable global K-Culture platform where creators and fandoms grow together.

LEISURE META

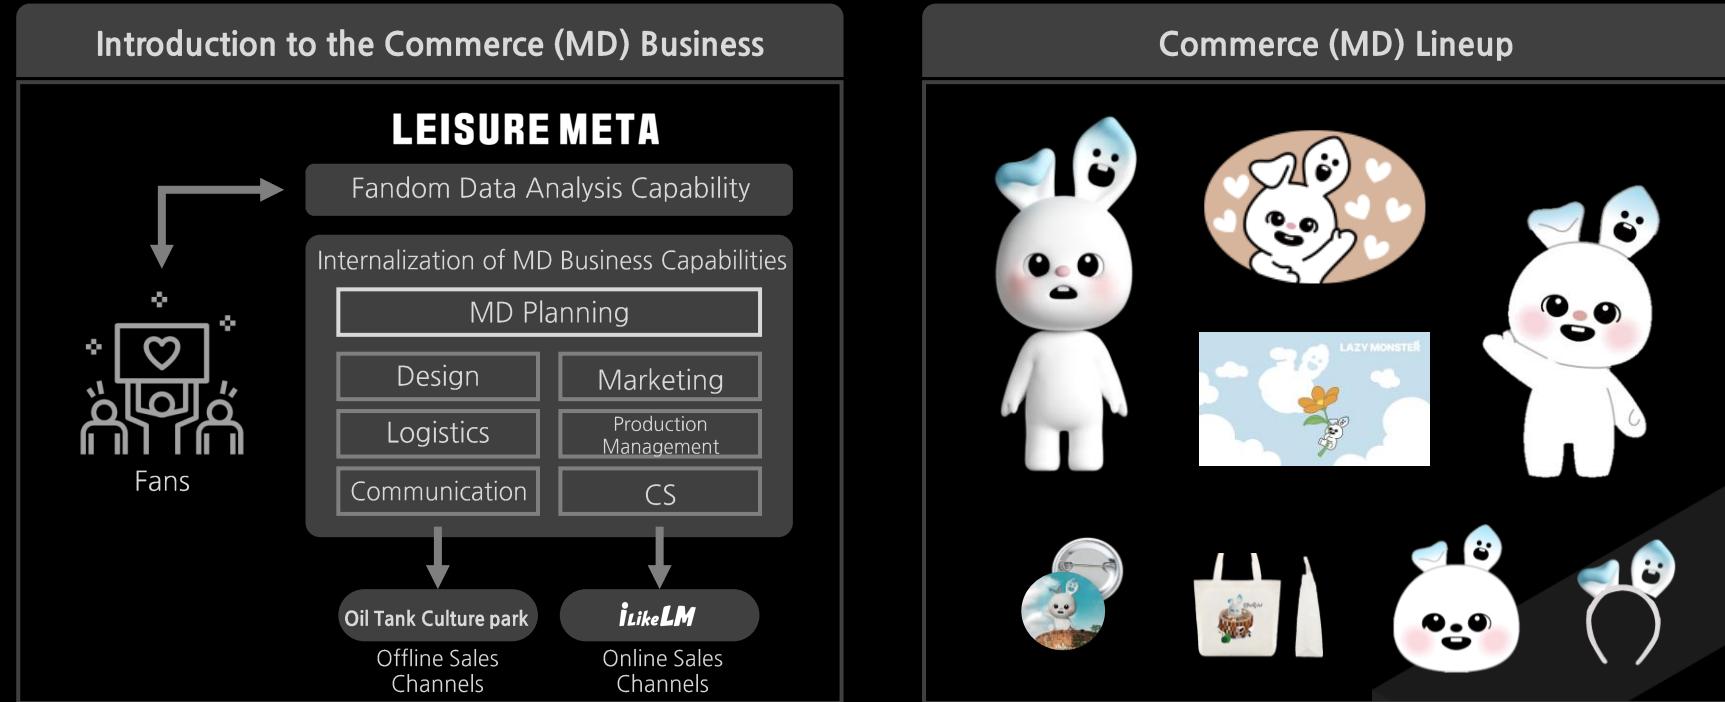

3-3 Business Model and Revenue Structure

LeisureMeta's business model is centered on proven domestic and global festivals, performances, exhibitions, and joint ventures. By leveraging fandom and network data to forecast performance demand and scale in advance, it secures stable cash flow and minimizes risk. Through this structure, participating promoters, agencies, and fandoms are interconnected to form a sustainable ecosystem. The revenue model consists of multiple components. First, promoters are selected for each performance, exhibition, or festival to plan and operate events. Promoters receive a guaranteed fee in advance for managing the event, thereby securing stable income. Revenue share and allocation are determined based on the activities of the promoters, while appropriate offline venues are chosen according to pre-event demand forecasting. Additional revenue is generated through ticket sales, MD products, and supplementary services.

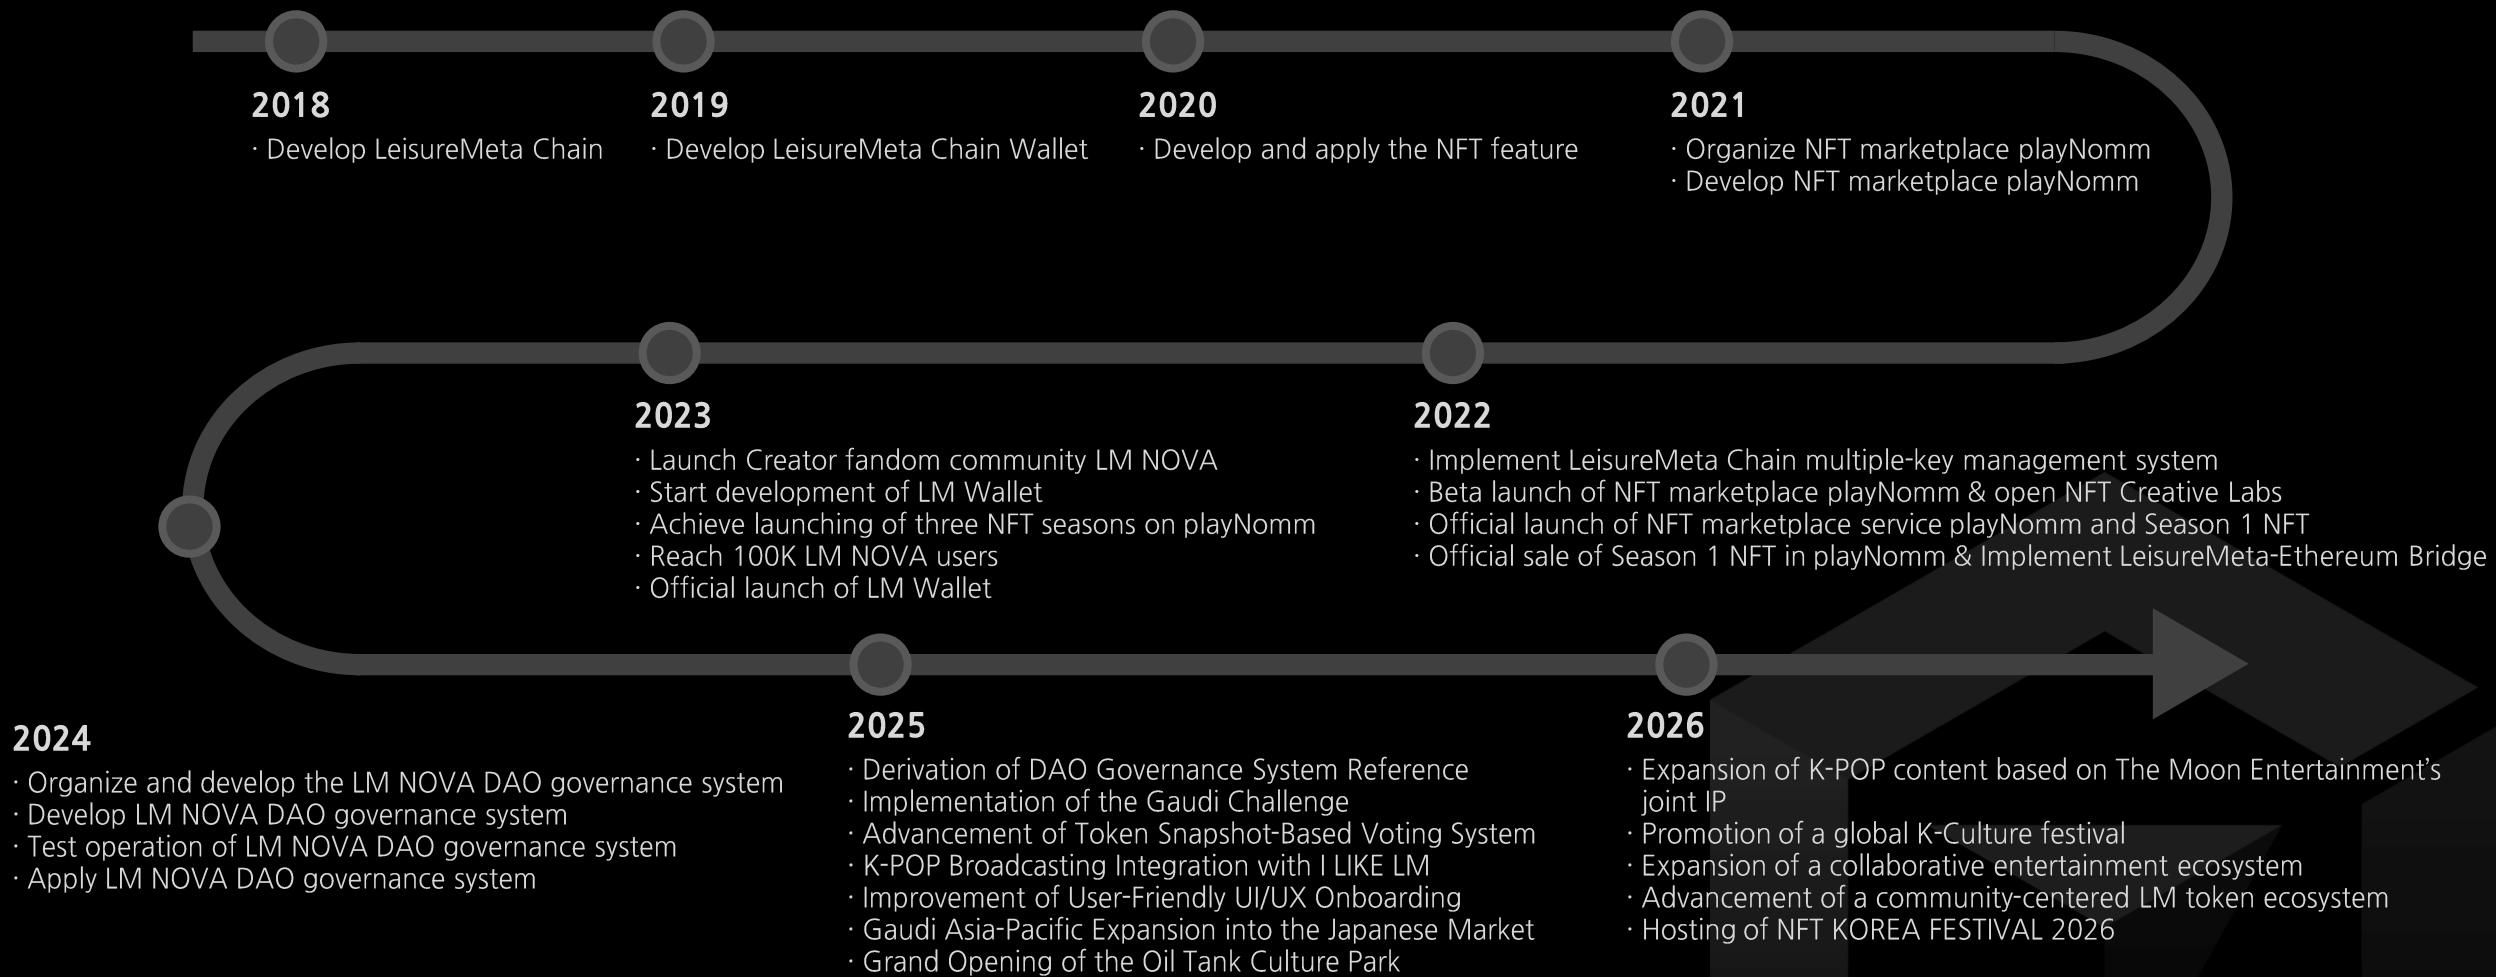

LeisureMeta promotes joint ventures in overseas performances, exhibitions, and festivals to expand its global fandom and network, while collaborating with local promoters to diversify revenue streams and manage risks. By leveraging fandom data and network information, the project forecasts event scale and profitability and generates additional revenue by offering data-driven consulting services. Key features include securing stable cash flow and minimizing risk through advance guarantee fees, increasing event success rates through fandom and data-driven decision-making, expanding business opportunities by linking with domestic and global promoters and venues, and diversifying revenue through the integration of online and offline activities as well as merchandise and ancillary service sales.

3-3 Business Model and Revenue Structure

LeisureMeta's business model and revenue structure focus on the internalization of commerce (MD) operations based on fandom data analysis. By analyzing the data generated from the activities of artists and fans, the project independently carries out the entire process of MD planning, design, marketing, logistics, production management, communication, and customer support (CS), thereby maximizing efficiency and profitability. The goods and content produced are distributed through the LM Oil Tank Culture Park as an offline hub and through online platforms, while fandoms contribute to the economic ecosystem not as mere consumers but as active participants in creation and community activities. This structure establishes an integrated sales channel that connects online and offline markets, securing a stable revenue base. Furthermore, by expanding a diverse MD lineup, it fosters a virtuous cycle that enhances fandom loyalty and engagement.

3-4 Roadmap

4-1 Technological Background

Performance

1 sec Block Time

Interoperability

Ethereum Gateway
Opensea Exportable

Cost-Effective

Zero Fee

Security

Tendermint-style Consensus
Mixed Data Structure

Efficiency

Orderless Transaction
Networking with Bloom Filter

Usability

Multiple Private Key Pairing
Device-Key Pair Signing

Characteristics of the LeisureMeta Blockchain

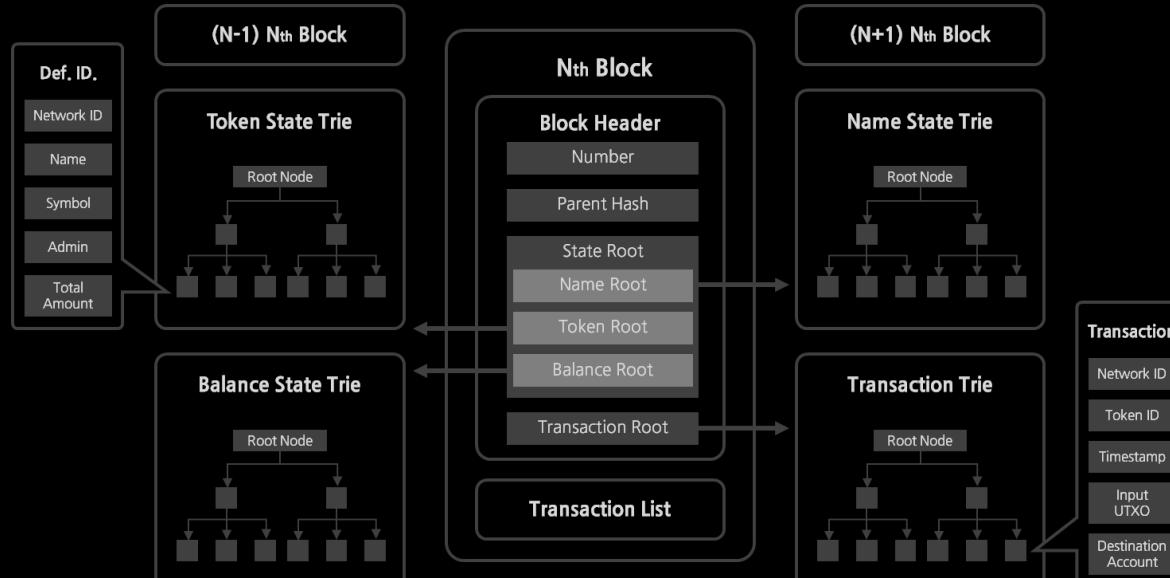

Category	Ethereum (PoW)	LeisureMeta Blockchain
Transaction Fee	~ \$5	Very Low
Processing Speed	~ 15 TPS	1,200 + TPS
Block Generation Time	15 ~ 30 Sec	~ 1 Sec
Block Finality	Probabilistic	Immediate

Limitations of Early Public Blockchains vs. LeisureMeta's Goals

In the early days when blockchain technology began to attract mainstream attention, most public blockchains, including Ethereum, faced a number of technical limitations that hindered the operation of full-scale services. Chief among these was the high transaction fee (gas fee) per transaction, which created significant barriers to user entry. The low processing speed of around 15 transactions per second (TPS) posed a critical limitation for real-time interactive services. In addition, restrictions in data storage capacity and efficiency made these blockchains unsuitable for handling large-scale multimedia content. Furthermore, the immaturity of smart contract technology, combined with complex user experiences (UX), served as a major obstacle to the mass adoption of blockchain.

The LeisureMeta Project was initiated to overcome these limitations. Rather than relying solely on existing public blockchains, it aimed to develop a new mainnet through independent research and development. Its primary objectives were: first, to achieve low transaction fees and high processing speed; second, to build infrastructure capable of transmitting multimedia data; and third, to establish a user-friendly blockchain environment that is easily accessible to everyone. Through these efforts, LeisureMeta seeks to lay the foundation for a Web 3.0-based community platform where creators and fans can interact in real time.

4-2 Development and Core Technologies of the LeisureMeta Chain

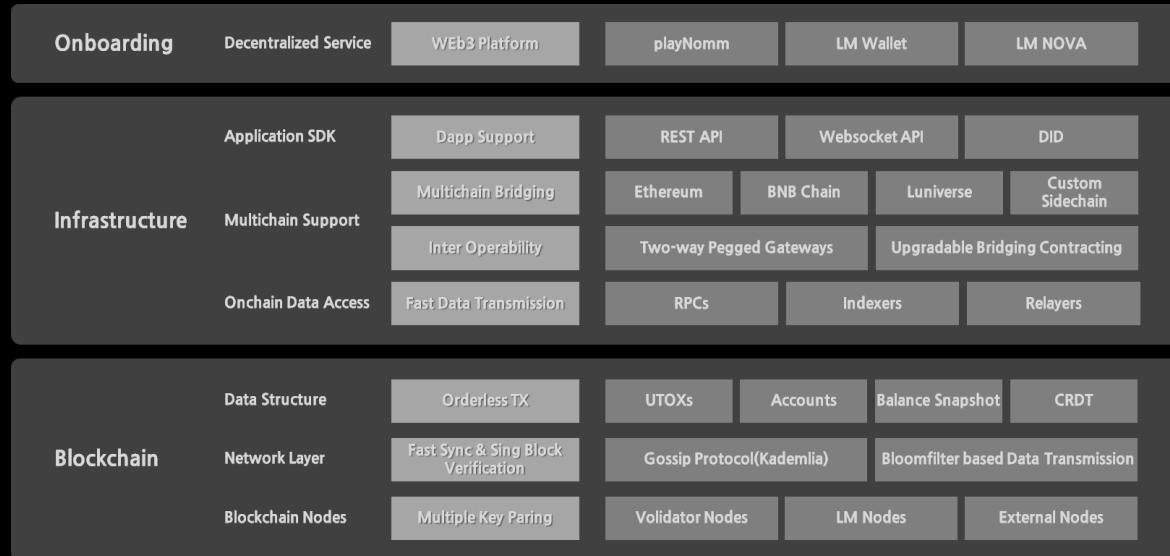

LeisureMeta Chain Data Structure Diagram

Technology	Description
Consensus Algorithm	Tendermint + HotStuff Hybrid Algorithm
Data Structure	UTXO + Account Hybrid
Data Transmission	Application of CRDT + Bloom Filter
Security / Usability	Device-Specific Private Key Pairing (Patent Pending)

Summary of Core Technologies of the LeisureMeta Chain

The LeisureMeta Chain is a proprietary mainnet completed after years of research, incorporating a range of innovative technologies to address the structural issues of existing public blockchains. At the core lies its hybrid consensus algorithm. The LeisureMeta Chain applies a unique approach that combines Tendermint and HotStuff, thereby achieving a balance between two often conflicting elements: speed and decentralization. From a data structure perspective, it enhances efficiency by integrating both the UTXO model and the Account model, while the application of CRDT (Conflict-Free Replicated Data Types) and Bloom filters significantly improves synchronization among nodes and the speed of data propagation. In particular, by combining various technological elements, the LeisureMeta Chain enables consensus participation with a single block and allows new nodes to synchronize at remarkable speed. Significant advancements have also been made in terms of security and user convenience. LeisureMeta introduced a patented device-specific private key pairing system, solving the complex and challenging problem of cryptographic key management. Users no longer need to handle long private key strings themselves and can intuitively operate wallets while maintaining strong security. These technological innovations position the LeisureMeta Chain not merely as a blockchain infrastructure but as a practical platform for operating next-generation Web3 services.

4-3 Performance and Operational Achievements

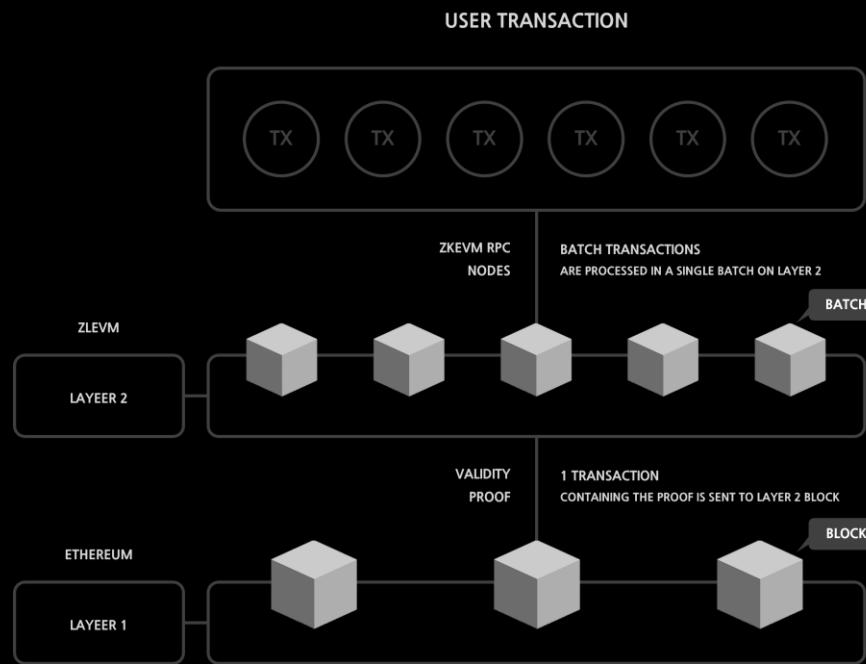

LeisureMeta Blockchain Architecture

Indicator	Value
Block Generation Time	Within 1 second
Processing Performance	1,200 TPS+
Cumulative Number of Blocks	13 million+
Number of Users	500,000+
NFT Issuance	35,000+

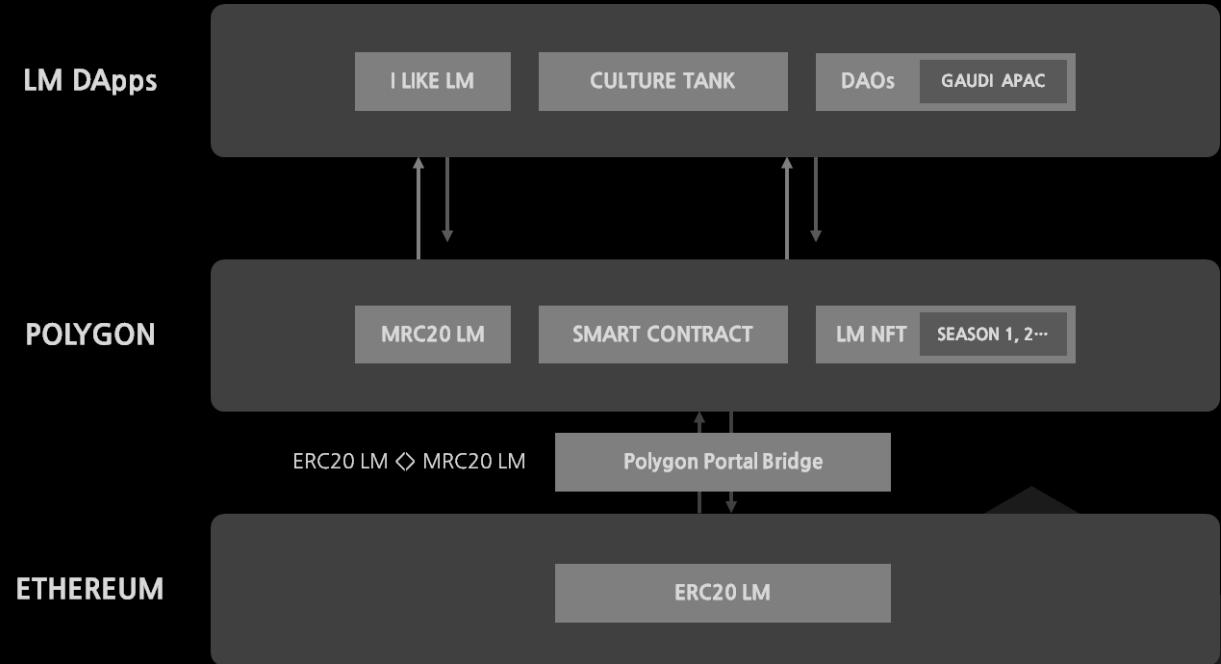

LeisureMeta Chain Operational Achievements

Since its launch, the LeisureMeta Chain has demonstrated its performance and stability with clear metrics. Block generation time has been reduced to under one second, providing rapid transaction finality, and the chain has been officially certified to process more than 1,200 transactions per second. This level of performance is competitive compared to major global blockchains and is well-suited for operating services that accommodate both multimedia data and large-scale user bases. Operational results have also been significant. Over the past three years, more than 13 million blocks have been generated, and a total of over 500,000 users have been active within the LeisureMeta ecosystem. To date, four DApps have been launched, meeting the diverse needs of creators and fandoms, and more than 35,000 NFTs have been issued, connecting directly to real economic activity. These achievements represent more than simple numbers; they prove that the LeisureMeta Chain functions not merely as a technological experiment but as a sustainable platform for ecosystem operations. By enabling creators and fandoms to share both economic and social value through blockchain, LeisureMeta presents new possibilities for the Web 3.0 era.

4-4 Strategic Transition: Integration into the EVM Ecosystem

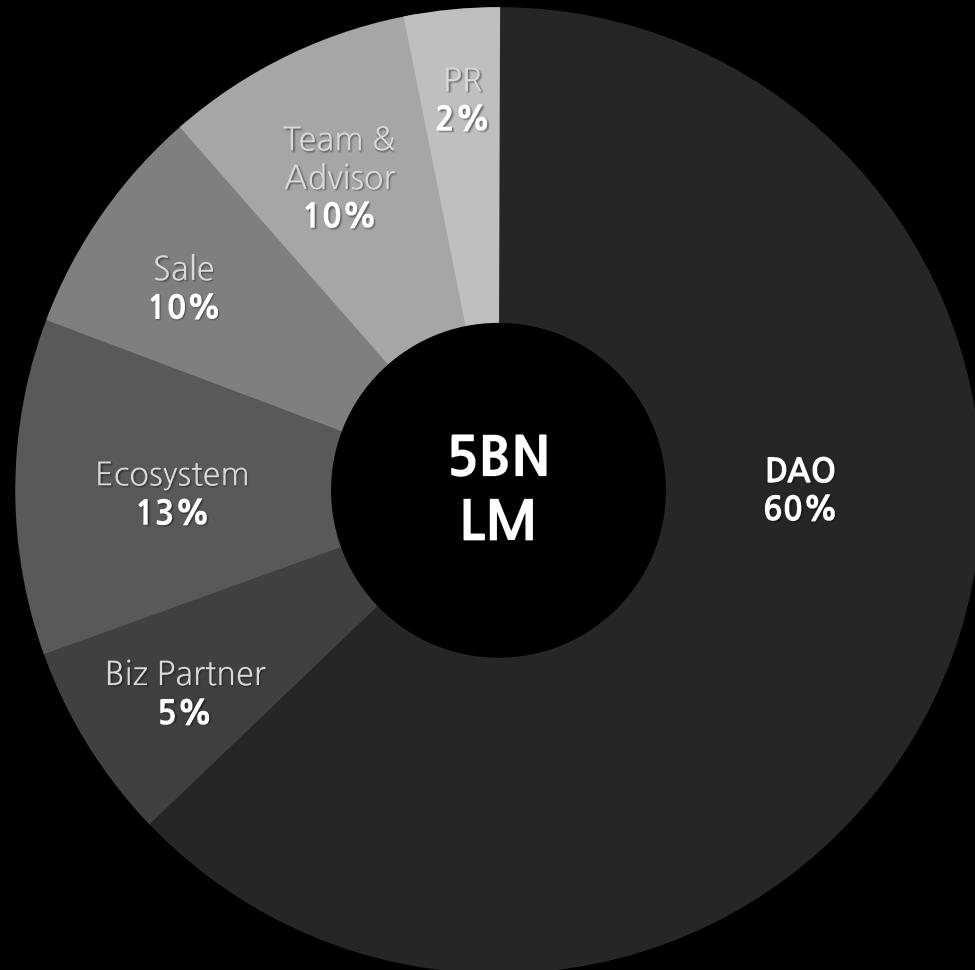

Polygon ZK-Rollup Architecture Diagram

LM - Ethereum - Polygon Architecture Diagram

Over time, the blockchain industry has undergone rapid change. In the past, developing a proprietary mainnet could serve as a competitive advantage, but the maturity of the Ethereum Virtual Machine (EVM) ecosystem has fundamentally altered the landscape. The emergence of Layer 2 solutions has dramatically improved issues related to transaction fees and storage costs, while the widespread adoption of ERC standards has established a de facto global standard for DApp development and interoperability. However, maintaining a proprietary blockchain requires continuous resource investment for security and verification, along with limited connectivity to external infrastructure and global ecosystems. Furthermore, as users have increasingly adopted EVM-based services, the isolation of proprietary chains has become an unavoidable reality. Recognizing these changes, LeisureMeta made a strategic decision: to discontinue the operation of its proprietary blockchain and pursue integration with the EVM ecosystem, specifically, Polygon. The reasons for selecting Polygon among numerous EVM-compatible networks are clear. Polygon inherits the robust security of Ethereum while providing unmatched processing speed and low fees through ZK-Rollup technology. It is also a proven platform trusted by leading global projects, offering an optimal environment for reliably rebuilding LeisureMeta's DAO, NFT, and DApp assets. This transition is not simply a technical migration but represents a strategic evolution in which LeisureMeta shifts its focus from infrastructure operation to user experience. By freeing itself from the burden of blockchain infrastructure management, LeisureMeta can now concentrate on delivering more valuable experiences to creators and fandoms.

5-1 Token Issuance Information

Token Information

Name	LeisureMeta
Ticker	LM
Standard	ERC-20
Issuance	5,000,000,000 LM
Address	0xc064F4F215B6A1E4e7F39bD8530C4dE0fC43ee9D

5-2 Token Distribution Structure and Circulation Plan

The LM Token is distributed in designated proportions for three primary purposes: (1) to ensure the secure launch of the LeisureMeta platform, (2) to build a robust ecosystem based on the LeisureMeta infrastructure, and (3) to maximize the governance rights of LeisureMeta platform members. For the project's scalability, an appropriate portion of tokens must be unlocked within a set timeframe. Except for the 2% allocated for promotional purposes, 98% of the tokens are initially locked and cannot be traded. These locked tokens are gradually unlocked over time, based on the listing date on major exchanges.

■ DAO (60%): Allocated for member rewards and the establishment of the DAO activity environment.

Starting from the 31st day after the listing date, 1.67% (1/60) is unlocked sequentially every 30 days.

■ Ecosystem (13%): Allocated for ecosystem operations and technological development.

Beginning 181 days after the listing date, 5% is unlocked sequentially every 30 days.

■ Sale (10%): Allocated through sales to purchasers in order to secure early development and operating capital.

On the listing date, 1% is unlocked, followed by 9% on the 31st day after listing. Thereafter, 10% is unlocked sequentially every 30 days.

■ Team & Advisor (10%): Allocated to the team, founders, and advisors.

Beginning 181 days after the listing date, 5% is unlocked sequentially every 30 days.

■ Biz Partner (5%): Allocated for collaboration with current and future partner companies.

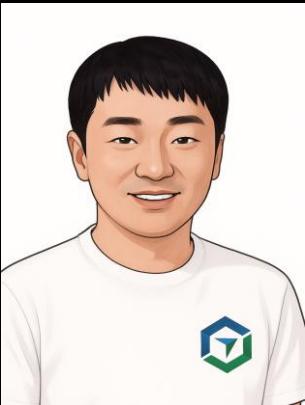

Beginning 181 days after the listing date, 5% is unlocked sequentially every 30 days.

■ PR (2%): Allocated to stimulate platform activity prior to listing on major exchanges and to provide liquidity for transactions.

The full amount is unlocked from the time of token issuance.

* The lock-up and release schedules specified in this white paper may be subject to change or extension depending on business progress or market conditions.

6-1 Core Team Members

Sung Uk Moon
CEO
Former] Executive Advisor of Skonec Ent
Former] CEO of Future EV
Former] Member of the Science, ICT,
Broadcasting and Communication
Committee at National Assembly of the
Republic of Korea

Dong Cherl Han
CTO
Former] Director of Security at
